Sequence 16044, Application US/09248796A

Sequence 16044, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICA

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: UNDER: 1050/248,796A

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12
                   Sequence 11767, Application US/09902540

| Sequence 11767, Application US/09902540
| Patent No. 6833447
| GENERAL INCORMATION:
| APPLICANT: Hinkle, Gregory J.
| APPLICANT: Glater, Steven C.
| APPLICANT: Stater, Steven C.
| TILE OF INVENTION: Myxococcus xanthus Genome Sequences and Uses Thereof TILE REFERENCE: 38-10(15849)B
| CURRENT PILING DATE: 2001-07-10
| PRIOR APPLICATION NUMBER: 60/217,883
| PRIOR FILING DATE: 2000-07-10
| NUMBER OF SEQ ID NOS: 16825
| SEQ ID NO 11767
| ERWORT SET SEQ ID NOS: 16825
| LENGTH: 567
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Goldman, Barry S.

    Patent No. 6747137
    GENERAL INFORMATION:
        APPLICATIN Keith Weinstock et al
        TIPLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
        TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GENERAL INFORMATION:

APPLICANT: GATY Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 99, Application US/09996288

Patent No. 6818216

GENERAL INFORMATION:
APPLICANT: Scott, Koenig
APPLICANT: Leslie, Johnson
TITLE OF INVENTION: and Treatment
TITLE OF INVENTION: and Treatment
CURRENT APPLICATION NUMBER: US/09/996,288

CURRENT PILING DATE: 2001-11-28

NUMBER OF SEQ ID NOS: 259

SOFTWARE: Patentin version 3.1

SEQ ID NO 99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 23, Application US/09996265
Patent No. 6855493
GENERAL INFORMATION:
APPLICANT: Voung, James
APPLICANT: Leslie, Johnson
TITLE OF INVENTION: Methods of Adminstering/Dosing Anti-RSV Antibodies for Prophylaxi
TITLE OF INVENTION: Methods of Adminstering/Dosing Anti-RSV Antibodies for Prophylaxi
TITLE OF INVENTION: Methods of Adminstering/Dosing Anti-RSV Antibodies for Prophylaxi
TITLE OF INVENTION: Mumber: US/09/996, 265
CURRENT APPLICATION NUMBER: US/09/996, 265
CURRENT APPLICATION DATE: 2001-11-28

"The genome of camelpox virus.";
Virology 295:1-9(2002).
'Yirology 295:1-9(2002).
'FUNCTION: Plays a role for multiplication of the virus in different cell types (By similarity).
'I SIMILARITY: Belongs to the poxviruses C7 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gobel S.J., Johnson G.P., Perkus M.E., Davis S.W., Winslow J.P., Paoletti E.; Johnson G.P., Paoletti E.; Appendix to 'The complete DNA sequence of vaccinia virus'."; Virology 179:517-563 (1990).

-1- FUNCTION: Plays a role for multiplication of the virus in different cell types (By similarity).

-1- SIMILARITY: Belongs to the poxviruses C7 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NUCLEOTIDE SEQUENCE [LARGE SCALE GENOMIC DNA].

-!- ENZYME REGULATION: Alternate between an inactive form bound to GD and an active form bound to GTP. Activated by a guanine nucleotide-exchange factor (GEF) and inactivated by a GTPase-activating protein (GAP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             germling and yeast.
-!- SIMILARITY: Belongs to the small GTPase superfamily. Ras family.
                                                                                                                                                                                                                                                     Jones T., Federspiel N.A., Chibana H., Dungan J., Kalman S., Magee B.B., Newport G., Thorstenson Y.R., Agabian N., Magee P.T., Davis R.W., Scherer S., "The diploid genome sequence of Candida albicans."; Proc. Natl. Acad. Sci. U.S., 101:7329-7334(2004).

-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rhizomucor racemosus (Mucor circinelloides f. lusitanicus).
